

The logo of The University of Texas at Dallas, featuring a circular seal with the letters 'UTD' in the center, the text 'THE UNIVERSITY OF TEXAS AT DALLAS' around the top, and 'EST. 1969' at the bottom. Two stars are positioned on either side of the 'EST. 1969' text.

Epipolar Geometry and Stereo

CS 4391 Introduction Computer Vision

Professor Yu Xiang

The University of Texas at Dallas

Recall Fundamental Matrix

- Epipolar line $\mathbf{l}' = F \mathbf{x}$
 $\mathbf{l} = F^T \mathbf{x}'$

- Fundamental matrix

$$F = [\mathbf{e}']_{\times} P' P^+$$

3x3

Epipole $\mathbf{e}' = (P' C)$

$$P^+ = P^T (P P^T)^{-1}$$

Why the Fundamental Matrix is Useful?

$$l' = Fp$$

Estimating the Fundamental Matrix

- The 8-point algorithm

$$\mathbf{l}' = F\mathbf{x}$$
$$\mathbf{x}'^T F\mathbf{x} = 0$$

Estimating the Fundamental Matrix

$$\mathbf{x}'^T \mathbf{F} \mathbf{x} = 0 \quad \mathbf{x} = (x, y, 1)^T \quad \mathbf{x}' = (x', y', 1)^T$$

$$x'x f_{11} + x'y f_{12} + x' f_{13} + y'x f_{21} + y'y f_{22} + y' f_{23} + x f_{31} + y f_{32} + f_{33} = 0$$

$$(x'x, x'y, x', y'x, y'y, y', x, y, 1) \mathbf{f} = 0$$

n correspondences

$$\mathbf{A} \mathbf{f} = \begin{bmatrix} x'_1 x_1 & x'_1 y_1 & x'_1 & y'_1 x_1 & y'_1 y_1 & y'_1 & x_1 & y_1 & 1 \\ \vdots & \vdots & \vdots & \vdots & \vdots & \vdots & \vdots & \vdots & \vdots \\ x'_n x_n & x'_n y_n & x'_n & y'_n x_n & y'_n y_n & y'_n & x_n & y_n & 1 \end{bmatrix} \mathbf{f} = \mathbf{0}$$

Linear System

$$\begin{matrix} & \mathbf{A} \mathbf{f} = \mathbf{0} \\ n \times 9 & 9 \times 1 \end{matrix}$$

- Find non-zero solutions
- If \mathbf{f} is a solution, $k\mathbf{f}$ is also a solution for $k \in \mathcal{R}$
- If the rank of A is 8, unique solution (up to scale)
- Otherwise, we can seek a solution $\|\mathbf{f}\| = 1$

$\min \|\mathbf{A}\mathbf{f}\|$
Subject to $\|\mathbf{f}\| = 1$

Solution: $\mathbf{A} = \mathbf{U}\mathbf{D}\mathbf{V}^T$ SVD decomposition of A

$n \times n \quad n \times 9 \quad 9 \times 9$

\mathbf{f} is the last column of \mathbf{V}

A5.3 in HZ

Estimating the Fundamental Matrix

- The singularity constraint $\det F = 0$

$$\begin{aligned} & \min \|F - F'\| \\ & \text{Subject to } \det F' = 0 \end{aligned}$$

$$F = UDV^T$$

Solution:

$$D = \text{diag}(r, s, t)$$

$$F' = U \text{diag}(r, s, 0) V^T$$

$$r \geq s \geq t$$

Special Case: A Stereo System

- The right camera is shifted by T_x (the stereo baseline)
- The camera intrinsics are the same

Special Case: A Stereo System

- Left camera

$$x_l = f \frac{X}{Z} + p_x \quad y_l = f \frac{Y}{Z} + p_y$$

- Right camera

$$x_r = f \frac{X - T_x}{Z} + p_x$$

$$y_r = f \frac{Y}{Z} + p_y$$

Stereo Disparity

- Disparity

$$\begin{aligned}d &= x_l - x_r \\ &= \left(f \frac{X}{Z} + p_x\right) - \left(f \frac{X - T_x}{Z} + p_x\right) \\ &= f \frac{T_x}{Z}\end{aligned}$$

- Depth

$$Z = f \frac{T_x}{d}$$

Baseline

Disparity

Recall motion parallax: near objects move faster (large disparity)

Special Case: A Stereo System

$$P = K[I \mid \mathbf{0}] \quad P' = K[I \mid \mathbf{t}]$$

$$F = [\mathbf{e}']_{\times} K' R K^{-1} = K'^{-T} [\mathbf{t}]_{\times} R K^{-1} = K'^{-T} R [R^T \mathbf{t}]_{\times} K^{-1} = K'^{-T} R K^T [\mathbf{e}]_{\times}$$

$$F = [\mathbf{e}']_{\times} K K^{-1} = [\mathbf{e}']_{\times}$$

$$\mathbf{e}' = (P' C) \quad \mathbf{c} = \begin{pmatrix} 0 \\ 1 \end{pmatrix}$$

$$K = \begin{bmatrix} f_x & 0 & p_x \\ 0 & f_y & p_y \\ 0 & 0 & 1 \end{bmatrix}$$

$$\mathbf{e}' = \begin{bmatrix} f_x T_x \\ 0 \\ 0 \end{bmatrix}$$

$$F = \begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & -f_x T_x \\ 0 & f_x T_x & 0 \end{bmatrix}$$

$$\begin{aligned} \mathbf{x}'^T F \mathbf{x} &= 0 \\ y &= y' \end{aligned}$$

Stereo Example

Disparity values (0-64)

Note how disparity is larger (brighter) for closer surfaces.

$$d = f \frac{T_x}{Z}$$

Computing Disparity

Left Image

Right Image

For a patch in left image
Compare with patches along
same row in right image

Match Score Values

- Epipolar lines are horizontal lines in stereo
- For general cases, we can find correspondences on epipolar lines
- Depth from disparity

$$Z = f \frac{T_x}{d}$$
